SUMMARY

I am an aspiring engineer passionate about web development, software development, and robotics. My goal is to innovate and gain hands-on experience in a collaborative environment. I am dedicated to learn and work on various projects that demonstrate my ability to apply technology to solve real-world problems

EDUCATION

B.Tech in Electrical Engineering

[Indian Institute Of Technology Palakkad](#)

CGPA
6.93 / 10

📅 08/2022 - 05/2026

📍 Palakkad

Intermediate

[ARIHANT H S SCHOOL](#)

CGPA
8.84 / 10

📅 04/2019 - 05/2021

10TH

[ST. JOSEPH'S ENGLISH MEDIUM SCHOOL](#)

CGPA
8.74 / 10

📅 01/2008 - 05/2019

SKILLS

C/C++	CSS	HTML	MATLAB
React/React Native	Python		
Robotics	Tailwind CSS		

EXTRACURRICULAR ACTIVITIES

Event Organization
Organizer for college events and workshops

POSITIONS OF RESPONSIBILITY(POR)

Technical Team Member,IAR

[Currently contributing to the development and maintenance of the official IAR website.](#)

📅 07/2025 - Present

As part of the IAR website development team, I am currently contributing to the design, development, and maintenance of the institute's IAR website. My role involves collaborating with fellow developers to build a responsive and accessible user interface using React and NodeJs.

PROJECTS

Portfolio

📅 05/2025

🌐 <https://portfolio-nine-lemon-70.vercel.app/>

Developed a fully responsive personal portfolio website to showcase my background, technical skills, and featured projects. The site includes dedicated sections for experience, projects with live demos and GitHub links, all designed to reflect a clean, modern look.

- Built a responsive, mobile-friendly UI using React and TailwindCSS
- Integrated live project demos and GitHub repositories to demonstrate practical work.

Autonomous Drone Landing on a Moving Platform

📅 08/2025 - Present

🌐 <https://github.com/MAUSUMIBHUYAN/Landing-drone-on-moving-platform>

Developing an drone landing system that combines vision-based tracking, MPC-PID hybrid control, and Kalman filtering to achieve precise autonomous landings on a moving platform.

- Implemented marker detection and GPS fallback for robust localization under dynamic conditions.
- Integrated Kalman-based state estimation with MPC-PID control to achieve smooth and stable autonomous landings.

Visual-Based Navigation

📅 01/2025 - 05/2025

🌐 <https://github.com/MAUSUMIBHUYAN/Vision-Based-Navigation>

Designed and implemented a GPS-independent autonomous drone landing system using computer vision techniques. The system enables the drone to detect a colored landing marker using its onboard camera, allowing it to accurately localize, navigate, and execute a precise landing without reliance on GPS signals.

- Achieved precise marker-based landing through real-time visual detection and processing.
- Enabled autonomous landing using onboard camera feed and color-based feature recognition.

RecipeTips App

📅 07/2025 - Present

🌐 <https://expo.dev/artifacts/eas/dkGWuitvbutHGzvQUg9Xuk.apk>

RecipeTips is a cross-platform mobile application built with React Native that allows users to explore, save a variety of cooking recipes. The app integrates the MealDB API for fetching a rich collection of recipes and uses Neon.tech's PostgreSQL database to store user-specific data like saved recipes and preferences. Clerk handles secure user authentication, providing a smooth sign-in/sign-up experience.

- Integrated Clerk for seamless and secure user authentication and session management.
- Used Neon.tech (PostgreSQL) to store and manage personalized recipe data for each user.
- Published APK using Expo, making the app ready for Android deployment with smooth UI/UX.

QuizMaster Web

📅 05/2025

🌐 <https://quiz-app-chi-wheat.vercel.app/>

QuizMaster is a dynamic quiz application built with React and Firebase, allowing users to sign in via Email or Google and attempt quizzes based on selected categories. After completion, users receive instant feedback with score summaries and answer reviews and progress tracking.

- Integrated Firebase Authentication for secure Email and Google login.
- Designed a modular quiz flow with category-based routing and responsive UI using React Router.
